Legend

- U1: second solution (at move 1).
- U2: cook; extra solution after move 1.
- U3: incorrect; White is unable to fulfil the stipulation (in a win study Black draws or wins; in a draw study White loses).
- U4: “super-cook”. White can even win in a study with a draw stipulation.
- U5: illegal initial position.
- (c): correction; i.e. original study was unsound.
- (m): modification; i.e. original study was sound, the improvement has another motivation.
- (s): corrected solution (without changing the position).
- (v): version (perhaps a correction or a modification).
- AN: 100% anticipation: the whole study was published earlier by someone else.
- CR: colours reversed (the original stipulation was: Black to win/draw).
- MC: too many composers to fit the “White” field. All names given as text before the first move.
- PH: posthumously published.
- SSZ: Schweizerische Schachzeitung
- TE: theoretical ending (i.e. probably not an endgame study).
- TT: theme tourney.
- TW: twin study (also triplicates, quadruplicates, etc).

The first two moves can be interchanged. This can easily be fixed by placing the black bishop on a different square, allowing the refutation **Rg7** after **1. Kh1**. The correction adds a bit more spice, at the cost of an additional white pawn.

In addition to Afek's cook, there is also the cook **3. Rb4+**. Afek's cook can be eliminated by an additional black pawn, and uniqueness of the solution can be ensured by changing the main line to **2. Bc8**.

The RRvsQ ending seems difficult to fix: the white rooks are simply too strong given the bad position of the black king. In addition to the cook on move 1, there is also the alternative win **4.Rg1** in the main line.

The version shows the theme (luring the black queen to g7 and trapping it) with a white knight and rook.

Adding a black pawn on e6 correct the study. However, there are two interesting features which do not change the content of the study. First, the white king could as well be on c6. Second, the black pawn could be on g3. The latter allows the black knight to be on b4 rather than b8, which makes the first move even more suprising. The correction uses these findings.

This is an interesting study. The white knight supports the mating attack by four blocks of the black queen checks. Unfortunately, White also wins after **1.Qc4+!**. The second study is a same-material correction, and the third one is a version adding one block in the main line and four blocks in the side lines, leading to a total of nine knight blocks.

1. **Qg4** is a dual in Korolkov's study because the probably intended 1... **Bc2** is not sufficient for a Black advantage. Adding a black pawn on a4 is a simple correction.

1. **g6** is a serious dual, because after 1... Ne6, White plays 2.b4! (instead of 2.f5), which transposes into the main line.

In Weenink's original study, various first moves lead to a win. The key of the study is to keep black king on the last rank (or the h-file), which is shown in the correction.
